OBJECTIVE/SUMMARY

Aspiring AI Engineer with hands-on experience in Deep Learning, Computer Vision, and LLM fine-tuning (QLoRA, PEFT, Transformers). Strong fundamentals in algorithms, data structures, and SQL. Experienced in building and experimenting with neural networks, GANs, and transfer learning models. Seeking AI/ML roles to apply technical skills and contribute to real-world projects.

TECHNICAL SKILLS

Languages: Python, C++, SQL, Java

Tools and Frameworks: PyTorch, Tensorflow, Transformers, PEFT, TRL, Numpy, Sklearn, Hugging Face, Pandas

PROJECTS/EXPERIENCE

SRGAN Research Implementation (Ongoing) Self-initiated (2026)

GitHub: To Be Uploaded

- Re-implementing the SRGAN (Super-Resolution GAN) paper from scratch to study generative upscaling architectures.
- Built the ResNet-based Generator and VGG19-based Discriminator networks in PyTorch.
- Currently experimenting with Perceptual Loss (VGG19) to improve texture detail, analyzing feature map activations (Conv5_4) to resolve PSNR convergence discrepancies compared to standard MSE loss.

Llama-3.2-1B QLoRA Fine-tuning — Self-initiated (2025)

GitHub: github.com/wkenjii/Llama-PEFT-QLoRA | Hugging Face: huggingface.co/Kenjiii/llama3.2-1b-dolly15k-qlora

- Fine-tuned Llama-3.2-1B on Databricks Dolly-15k for instruction-following behavior using QLoRA and PEFT.
- Implemented 4-bit quantization (NF4) for low-VRAM training on Kaggle.
- Produced both adapter and merged model for flexible deployment.
- Achieved concise, instruction-aligned responses compared to the base model.
- Explored integration of TRL's SFTTrainer, preparing groundwork for future RLHF fine-tuning.

Mini Project (Group): Traffic Sign Classification on TSRD Dataset - UTAR

- Experiment with different Pre-Trained models such as VGG16, ResNet50 and MobileNet with Transfer Learning and Fully Fine-Tuning performance on Chinese Traffic Sign Database.

Practical Experience: Deep Learning/Computer Vision/LLM GitHub: github.com/wkenjii/LLM

- Practical understanding of *Computer Vision*, *RNNs* and *Transformers Architecture*
- Final Year Project: VLM Anomaly Detection on Plant Leaf (Experiment Zero-Shot Single/Multiclass Prompting Performance)

EDUCATION/EXTRA CURRICULARS

GAMUDA AI ACADEMY 2026 COHORT 6

Bachelor of Computer Science (UTAR) Oct 2025: CGPA 2.97

Diploma in Information Technology (TARUMT) 2022: CGPA 3.41

CERTIFICATIONS/EXTRA CURRICULAR

- UTAR - Python from Basic to Advance (Dec 2022)
- Coursera - Supervised Machine Learning: Regression and Classification (2022)
- Member of UTAR Computer Science Society (2023)
- Member of UTAR Mindful Youth Innovator (2023)
